

LEVEL 1 – MASTER PRODUCT FLOW

This is the primary daily loop.

Everything revolves around this.

LEVEL 2 – BOTTOM NAVIGATION STRUCTURE

If I were designing this app:

Bottom Navigation:

Home
Pantry
Planner

AI Assistant floating button visible globally.

LEVEL 3 – ONBOARDING FLOW

No branches.

Linear.

You want onboarding completion.

Not exploration.

LEVEL 4 – HOME FLOW

Home acts like an airport control tower.

LEVEL 5 – PANTRY FLOW

This is your Household Memory System.

PANTRY OVERVIEW

Very important:

Everything loops back.

Never dead end.

LEVEL 6 – RECOMMENDATION ENGINE FLOW

Core value proposition.

HOME

RECOMMENDATION DETAIL

BEST

QUICK

LAZY

PROTEIN FOCUSED

RECIPE DETAIL

COOK MODE

MEAL COMPLETED

FEEDBACK

INVENTORY UPDATE

HOME

This loop should happen every day.

LEVEL 7 – PLANNER FLOW

Future-oriented.

Planner feeds Shopping.

Not vice versa.

LEVEL 8 – SHOPPING FLOW

RESTOCK DASHBOARD

PURCHASE RECOMMENDATIONS

SHOPPING LIST BUILDER

CART COMPARISON

PURCHASE COMPLETE

INVENTORY UPDATE

PANTRY

Notice:

Shopping updates Pantry.

Pantry updates Recommendations.

Recommendations update Planner.

Planner updates Shopping.

The whole product is circular.

LEVEL 9 – COMMUNITY FLOW

Separate ecosystem.

COMMUNITY HOME

Community should feel optional.

Never mandatory.

LEVEL 10 – AI ASSISTANT FLOW

The AI layer sits above everything.

PANTRY
DATA

PROFILE
DATA

PLANNER
DATA

This is important:

AI is not a feature.

AI is an alternate navigation layer.

Users should be able to skip:

Home
↓
Pantry
↓
Item Detail

and instead simply ask:

"How many eggs do I have left?"

THE MOST IMPORTANT DIAGRAM

If you only make one diagram in Figma, make this:

This is the actual architecture of the product.
